PACKAGING®

Benefits provided through manufactured unit dose products

Safety, efficiency, and compliance are each critical to pharmacy staff and caregivers in facilitating positive patient outcomes. In striving to meet relevant objectives, hospital, institutional, and long-term care pharmacies seek quality barcoded medications to dispense to their patients.

American Health Packaging supports customer BCMA initiatives through a robust line of barcoded unit dose products. Our portfolio supports critical needs for pharmacies and provides key benefits for customers and patients as facilities prioritize superior quality care.

Patient safety

Ensuring the right medication is given to the right patient at the right time—and in the right strength—is imperative. As facilities compete to demonstrate that they provide the highest quality care, pharmacies can assist by providing caregivers with as many products in unit dose format as possible. American Health Packaging products allow for hospital pharmacies to obtain a broad range of unit dose products easily – and help ensure safe medication delivery for patients through accurate packaging and barcoding that scans correctly as intended.

Pharmacy efficiency

Pharmacies also strive to process orders efficiently and supply medications for patients as quickly as possible. Managing a complex in-house repackaging chain slows down this process. It also distances clinicians from their core patient care competencies. American Health Packaging is committed to providing a portfolio containing both high-demand and difficult-to-find unit dose products meeting various needs. These items arrive at your pharmacy ready to dispense. Our broad offering closes the gap between what caregivers need to dispense at the patient bedside and what is available in on the market in prepackaged unit dose.

Liability management

Pharmacy repackaging operations can be subject to distractions from a variety of sources. An active pharmacy environment can encourage lapses in concentration and present opportunities for staff

error. Since these errors may vary in gravity and place liability on the facility and caregivers, mitigation of risk is key. Unit dose from American Health Packaging can help shift liability burden away from staff.

Cost savings

Facilities that repackage on site are subject to direct costs associated with hosting operations. These include expenses related to repackaging supplies, capital equipment, and paying highly-trained professionals to perform, manage, and support non-core work. American Health Packaging unit dose allows for facilities to minimize these direct costs while addressing potential expenses associated with in-house repackaging error.

About American Health Packaging

In business for over 30 years, American Health Packaging is the market leader in providing barcoded unit dose oral solids to the healthcare marketplace. We provide a specialized portfolio of nearly 600 oral solid, liquid, and inhalation products to support bedside point-of-care initiatives. Our manufacturing facility is registered with the Food and Drug Administration (FDA), adheres to current Good Manufacturing Practices (cGMP), and is licensed by the Drug Enforcement Administration (DEA) to package Schedule II-IV controlled substances.
