What Is a GTIN?

GTIN is an acronym for Global Trade Identification Number and is a 14-digit number. The GS1 assigns a prefix to a registered company which is used to create an item number. For drug products, the prefix includes the FDA assigned labeler code:

GS1 Prefix	NDC Labeler Code	GS1 Prefix	NDC Labeler Code
00360687	60687	00368000	68000
00368084	68084	00368002	68002
00362584	62584		

AHP's product catalog includes Dietary Supplements. For these products, the GS1 has assigned a UPC-style prefix. AHP has the following GS1 assigned non-drug prefixes:

GS1 Prefix	AHP ID Prefix	GS1 Prefix	AHP ID Prefix
00858526005	58526	0814301020	14301

If your product database does not allow the storage of the 14-digit GTIN, programming will be required by your product data provider to extract the NDC or AHP ID from the GTIN. The format of the three-segmented numbers are as follows:

10-Digit NDC	11-Digit NDC	11-Digit AHP ID
5-3-2	5-4-2	5-4-2

What Does the Data Reference?

The encoded data follows GS1 specifications. There are two-digit Application Identifiers (AIs) that that will help GS1 compliant systems identify the information being read.

AHP uses the following AI codes:

GTIN (14-digit)	Expiration Date (YYMMDD)	Lot Number (6 to 14 digits)	Serial Number (1 to 12 digits)
01	17	10	21
